

APPENDIX A

THE CLAIMS

The claims present on appeal are as follows:

Claim 1. A process to inhibit or destroy cancer cells, to prevent the development of clinical cancer, or if it has already developed, to inhibit or destroy clinical cancer, regardless of cell type, comprising producing and administering a vaccine composed of malignin, Recognin L, Recognin M or other Recognins, or derivatives of these Recognins which contain their immunologic specificity as evidenced by the production of anti-Recognin antibody.

Claim 2. A vaccine product, which contains the immunological specificity of malignin, Recognin L or Recognin M, which upon administration to humans or animals, will cause cancer cells, regardless of cell type, to be inhibited or destroyed and will prevent the development of clinical cancer, or if it has already developed, will destroy the cancer cells or inhibit their growth.
